"The easy way to manage your web presence."

DocuVision

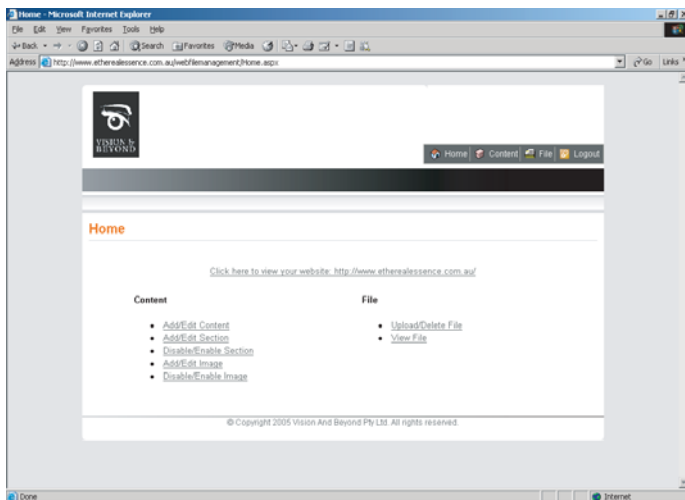

DocuVision Web

DocuVision Web is a complete business website solution. Designed with the user in mind, DocuVision Web enables a business not only to have a website, but to keep that website updated as often as they like. No longer does a business need to get their site updated by professional web developers, through its "What You See Is What You Get" (WYSIWYG) interface, all the hard work is done.

The typical website that utilises DocuVision Web consists of two components, the front end or presentation part of the web and the administration area used to update the website. The area that is presented to the visitors of your site can be configured around most designs.

The first step is to have the website design integrated by Vision and Beyond, menus are linked to primary pages and all pages are formatted accordingly. At this point the website is ready to be managed by the back end DocuVision Web File Management module. This module contains the following features:

- Add/Edit Content
- Add/Edit Section
- Add Image
- Upload Files

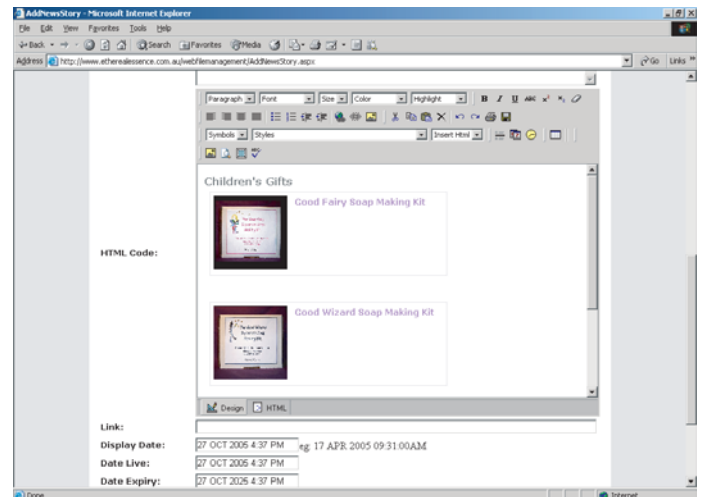

The DocuVision Web File Management module is accessed and run through a web browser allowing for changes to be made from anywhere at anytime as long as the administrator has access to the website being maintained.

Content Management

Content can be added, edited and deleted through the DocuVision Web File Management module. Content can be organised into sections, to group related pages together. Images can be uploaded into a mini library for use on a location of the page and files such as Adobe Acrobat PDF's can be uploaded and linked from content pages.

Carrying out any addition or editing of pages is done through a WYSIWYG editor. There is no need to learn or buy a third party HTML editor and in most cases very little HTML knowledge is required.

The editor has all the elements required to maintain the pages. Styles are displayed in a selection box to assist administrators to keep a uniform look throughout the site and for the more experienced, the HTML can be edited directly.

No longer is there an excuse not to have a website that has information that is out of date. If your business wants repeat visitors, the best option you have is to keep your site information changing. With DocuVision Web you no longer need to be an expert, require sophisticated editing software, and ftp files to keep your site up to date, DocuVision Web replaces all this and makes you an instant Web Administrator.
